

Criteria used to sponsor research

The criteria used by Fundación Dr. García Rinaldi to sponsor research are:

- 1- The Fundación Dr. Raúl García Rinaldi sponsors research according to the available funding. When funding is available, a call or convocation to sponsor research is made.
- 2- A Committee within the Board of Directors will establish both the format of the applications and the research proposals. The research must comply, in its totality, with the rules established in the proposal. The proposal must have been received by the limit time established. The proposal must be accompanied by an intention letter.
- 3- The research must comply with the experimental outline.
- 4- Sufficiency of institutional resources and personnel in the investigation.
- 5- Evaluation of the human and ethical considerations of the effects of the study.
- 6- Those who apply for the sponsorship must possess a doctoral degree in medicine or in health sciences.
- 7- The principal investigator of a grant is the individual whose research is to be supported. The principal investigator will be on the staff at the institution where the research is performed and will assume direct responsibility for conducting the research project. All applications are considered new applications. In the case that a previously approved application has been made, progress reports and for expenditures reports must be received prior to applying for a new application.
- 8- The research must be original.
- 9- The research must be started and finished during the time established by the Committee.
- 10- The research must qualify under the exemption code 501 (c) 3.
- 11- The research must contribute to the necessities of the community.
- 12- The Committee will look at the commitment, performance and qualifications of the researcher as criteria for consideration.
- 13- The research must not be geared towards clinically testing drugs for commercial pharmaceutical companies. The research must not be on drug testing to comply with the Food and Drug Administration before drugs are marketed.
- 14- The main researcher must demonstrate, in his previous work, a solid compromise with society's needs.
- 15- The main researcher must be willing to do volunteer work in the field of cardiovascular health.
